Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The *Agrobacterium* strains were grown in YEA medium for 24 h at 28°C. The cell concentration was adjusted to 10⁸ cells/ml. The cell suspension was then diluted with distilled water to the indicated concentrations. The cell suspension was then mixed with the plant tissue and the transformation efficiency was determined. The data are the mean of three independent experiments. Error bars represent standard deviation.
